NAME OF THE COU	F THE COURSE Business Intelligence								
Code	EUB311		Year of study			1 (graduate)			
Course teacher	Alfirevi	ofessor Nikša ć, PhD ofessor Mario PhD	Credits (ECTS)			5 ECTS			
Associate teachers			Type of instruction (number of hours)		L 26	S	E 26	F	
Status of the course	Comp	ulsory/Elective	Percentage of application of e-learning		40%				
COURSE DESCRIPTION									
Course objectives Course enrolment requirements and	Objective of the course is to introduce the theoretical foundations and the selected practical tools for data warehousing and analysis, as directed toward managerial decision-making. Elementary practical knowledge, related to the usage of a personal computer, a Web browser and office productivity (Word, Excel, Powerpoint).								
entry competences required for the course									
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	Evaluate forms, importance and application of information in theory and practice of contemporary business Assess the concept, sources and the role of business information and the multidisciplinary definitions of business and competitive intelligence Recommend a relevant process and methods of business intelligence, with the application of the CRISP methodology Appraise the concept, objectives and processes of Web analytics, with the application of relevant Web analytics metrics (Key Performance Indicators – KPIs, benchmarks and Web analytics outcomes)							n the	
	쑮	Lectures		Exercises:					
	Week	Topic		Hours		Тор	ic		Hours
Course content broken down in detail by weekly class schedule (syllabus)	1	Introduction to Business (BI). Forms, importance application of informatic and practice of contemp business.	and on in theory	2	and the Intelliger and hier mining a	tory discu concept o nce (BI). M archical le nd Knowle ases. Data	f Business Iethodolo vels of Bl. edge Disc	gies Data overy	2
	2	Information science and information science concumulation and commuscience and/vs. BI. Intell activities.	cepts. nication	2	Multi-dimensional data analysis in MS Excel.		lysis	2	
	3	Business information, BI Competitive Intelligence concept, sources and the business information. Multidisciplinary definiti CI.	(CI). The e role of	2	Extraction loading of Data mire to CRISP	ality. Pre-pon, transford data (Ening proce and SEMI blogies. Ar arces.	rmation a TL process sses, acco	ind ses). ording	2

	4	Business information systems (IS) in BI. Definition and characteristics of an IS in BI. Tehnological foundations of BI. Data warehouses and data warehousing (DW).		Model-building in Rapid Miner. Preparing data. Correlations and data association.	2		
	5	Architecture and building a DW system. Fundamental forms of DW system architecture. ETL processes.		Model-building in Rapid Miner. Association rules.	2		
	6	Enterprise Information Architecture and data integration. DW vs. Data Lake.	2	Model-building in Rapid Miner. K- means clustering.	2		
	7	User applications (front-end) in BI. Reporting and search tools. OLAP.		Model-building in Rapid Miner. Text mining.	2		
	8	Evaluation 1	2		2		
	9	User applications in BI (continued). Indicator dashboards and scorecards. Analytic applications.	Model-building in Rapid Miner. 2 Linear regression.		2		
	10	Spontaneous/unmanaged BI systems (Data Shadow systems).	Model-building in Rapid Miner. Logistic regression.		2		
	11	Managerial and organizational aspects of BI. Teams and employees, BI training and data ownership.	2	Model-building in Rapid Miner. Decision trees.	2		
	12	Fundamentals of Web analytics. The Web analytics concept, objectives and process.	2	All-round discussion. Creating own Data Mining models, by using a realistic dataset.	2		
	13	Application of Web analytics in business decision-making. Web analytics metrics – Key Performance Indicators and becnchmarks. Outcomes of Web analytics.	2	. Presentations of the working versions of data mining models. All-round discussion	2		
	14	Technological foundations of CI. Related concepts (HUMINT and OSINT). Information infrastructure for CI.	2	Presentations of the working versions of data mining models. All-round discussion	2		
	15	Evaluation 2	2		2		
Format of instruction	x lectures x seminars and workshops x exercises □ on line in entirety x partial e-learning □ field work		x independent assignments □ multimedia □ laboratory □ work with mentor □ (other)				
Student responsibilities	Students have to participate in classes and individual assignments. The assignments need to be submitted to the lecturers, by using the Moodle LMS, by the previously designated deadlines. Requirement for the successful completion of the course is 50% of class attendance for full-time students and 25% for part-time students. Students are also required to participate in 2 self-evaluation quizzes on						

2024./2025.

	the Moodle system, as to be allowed to participate in final evaluation.						
Screening student work (name the proportion of ECTS credits for each activity so that the total number of ECTS credits is equal to the ECTS value of the course)	Class attendance		Research		Practical training	0.5 ECTS**	
	Experimental work	0,5 ECTS	Report		Individual assignments - exercises	1 ECTS*	
	Essay		Seminar essay		Individual evaluation (Other)	1.5 ECTS****	
	Tests		Oral exam		(Other)		
	Written exam		Project	1.5 ECTS***	(Other)		
	* Students are required, on the weekly basis – as a preparation for exercises, to						

- * Students are required, on the weekly basis as a preparation for exercises, to individually study the previously published study material (case studies, videos, professional articles, etc.), available on the Moodle LMS. Once in the semester, students are expected to prepare an individual presentation of a selected topic, from the field of BI methodologies and information systems. This presentation will be discussed in class (exercises). Students are expected to participate in discussions, covering all LOs in this subject (during exercises).
- **Each week, students are required to provide a solution to an assignment, related to a selected problem, which is published on the Moodle LMS. The assignment form is a short essay, submitted by the designated deadline, by using the Moodle LMS. These forms of evaluation cover the individual achievement of all LOs.
- *** Students are required, by continuous work during the semester, to design and present (at the end of semester), a conceptual solution of a business problem, with the application of BI methodologies and tools. This form of evaluation covers the group achievement of all LOs.

Grading and evaluating student work in class and at the final exam

**** Two individual, problem-based evaluations are organized during the semester, with the allowed use of the study material ("open book evaluations"). To participate in the second evaluation, a student needs to have a positively evaluated first one. The score is calculated as a mean of scores for both evaluations. If the student fails to pass the evaluations, those can be substituted by a final evaluation at the end of the semester. This form of evaluation evaluates the individual success in achieving all the course LOs.

Complete evaluation of student work is based on the following weights:

- Evaluation of individual LO achievement based on the two individual evaluations, during the semester, or the final cumulative evaluation (40% of the complete evaluation);
- Evaluation of individual LO achievement, based on the homework short essays, submitted weekly by using the Moodle LMS, after the exercises (24% of the complete evaluation);
- Evaluation of individual LO achievement, based on the preparation and presentation of a selected topic from the field of BI methodologies and information systems (during the exercises), including the active participation in all group discussions (6% of the complete evaluation);
- Evaluation of group LO achievement, based on the design of a conceptual solution of a BI problem, by using the BI methodologies and tools, including the presentation at the end of semester (30% of the complete evaluation).

Score of an individual evaluation is presented as a percentage (on the scale of 0%

to 100%). Overall evaluation is based on the weighted average score. The minimum score for the class to be successfully completed is 50% of the overall weighted average Marks, describing the LO achievement, are associated with the following values of the overall weighted average score: 70 - 74% - satisfactory (2) 75 - 79% - good (3) 80 - 85% - very good (4) 86 - 100% -excellent (5).
