NAME OF THE COURSE Multidimensional information systems										
Code	EUB405		Year of study			<u> </u>				
Course teacher	Full F Ćuku Full F	Professor Maja Šić, PhD Professor Mario ć, PhD		Credits (ECTS)			5 ECTS			
Associate teachers	Ivana PhD	Ninčević Pašalić,		Type of instruction number of hours)			S	E 26	F	
Status of the course	Com	oulsory	Percentage application		arning	26 26 40%				
		COURSE	DESCRIP							
Course objectives	 Get a comprehensive understanding of the concepts and solutions for data storage and business data analysis. Develop the ability to use tool(s) for the entire process of data warehousing and data processing (from data modeling and ETL, to presentation & visualization of data to end users using OLAP reports). 									
Course enrolment requirements and entry competences required for the course	Understanding of basic concepts of relational databases. Basic knowledge of MS Office Access.									
Learning outcomes expected at the level of the course (4 to 10 learning outcomes)	 Re-examine the importance of data warehouse and OLAP systems for business analysis. Compare relational and multidimensional data model. Develop an appropriate multidimensional data model for a specific business problem. Develop ETL process for a specific business problem. Present business data using interactive OLAP analyzes and reports. 									
Course content broken down in detail by weekly class schedule (syllabus)	e k	Lectures:			E	Exercises:				
	Weel	Topic		Hours	Topic			Hours		
	1	Defining multidimension information systems. D meanings of the OLAP	ems. Different		Micros syster	soft Dyna n and its uction to	and reporting. amics NAV, the functions. OLAP		2	
	2	Functional requirement systems. Logical and p requirements. Limitatio relational databases ar spreadsheets.	hysical ns of SQL, nd	2		soft Dyna compon	mics NA\ ent.	/	2	
	3	Dimensions. Multidime types of data. Hierarch structuring. Dimension	ical	2	OLAP Conne	compon	mics NA\ ent. namics N		2	

	1		1	_	1		
		Metrics. Visualization of					
	4	multidimensional data.	2	Basics of Microsoft SQL Server.	2		
	5	Hyper cubes. Multidimensional data scheme.	2	Microsoft SQL Server data warehouse. Database design for OLAP reporting.			
	6	Star and snowflake data models.	2	Microsoft SQL Server and Business Intelligence Development Studio (Integration Services).	2		
	7	Multidimensional formulas. Hierarchical formulas.	2	Microsoft SQL Server and Business Intelligence Development Studio (Analysis Services).			
	8	Test					
	9	Complex multidimensional formulas. Aggregation formulas. Sources of data. Links to data sources. Types of connections.	2	Microsoft SQL Server and Business Intelligence Development Studio (Reporting Services). CubePlayer OLAP client, functionality and connectivity to MS SQL Server 2008.	2		
	Transformations of data. Preaggregating.			2 Modelling in OLAP Cube Player.			
	11	Designing OLAP models. Specification of user requirements.	2	Modelling in Tableau.	2		
	12	models.		Reporting with SAP Crystal Reports.	2		
	13	OLAP applications.	2	Reporting with Tableau.	2		
	14	Data visualization. Presentations of case studies OLAP system applications.	2	Reporting with Tablea. Final Assignment presentations.			
	15	Test					
Format of instruction	x lectures x seminars and workshops x exercises □ on line in entirety x partial e-learning □ field work x independent assignments x multimedia □ laboratory □ work with mentor □ (other)						
Student responsibilities	The course work can be described as a method of continuous student progress evaluation since a model of accumulation of points has been formulated which enables the student to collect points through various activities. The goal is that every student collects sufficient number of points corresponding to a grade during the semester. In this model, a low result in one activity can be compensated by points in other activities and enabling students to decide how to allocate their efforts. Requirement for taking the test: 4 out of 7 assignments completed for the first test, and 4 out of 6 for the second test. Requirements for the exam are completed final assignment and case study as well as participating in at least 50% of all class meetings (25% for the part-time students).						

	T	1					
Screening student	Class attendance	ance 1,7 ECTS Research		Practical training			
work (name the proportion of ECTS credits for each activity so that the total number of ECTS credits is equal to the ECTS value of the course)	Experimental work		Report		Tests (Other)		
	Essay	0,5 ECTS	Seminar essay		Final assignmer (Other)	t 1 ECTS	
	Tests	s 1,6 Oral exam		Workshop attendance (Other)	0,2 ECTS		
	Written exam		Project		(Other)		
Grading and evaluating student work in class and at the final exam	Requirements for the exam exemption: a total of 71 points achieved overall based on the tests, assignments, and homework during the semester. Through additional engagement and active participation (for example by submitting critical review of the book chapters and coursework), the student can get up to 14 bonus points. In the case of exam exemption, the score is based on the total number of points where every five points give a higher grade. Up to 10 points can be achieved in the oral part of the exam. Threshold and related grades: 0-70 insufficient (1) 71-75 sufficient (2) 76-80 good (3) 81-85 very good (4) 86-100 excellent (5) If a student does not have enough points from the assessment activities during the semester, he or she is required to take the final exam. The final exam can be organized in a written and/or oral way. The questions in the exam are of the essaytype.
